Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Pursuant to a congressional request, GAO provided estimates of the prevalence of Alzheimer s Disease (AD) in the United States, including projections for prevalence in the near future. GAO noted that: (1) on the basis of existing studies, it is estimated that at least 1.9 million Americans 65 years of age or older suffered from any level of AD--mild, moderate, or severe--in 1995; (2) this number would be closer to 2.1 million if adjusted for the omissions, in many of these studies, of cases with mixed dementia and cases missed by the screening instruments used; (3) when only people likely to need at least some active assistance with personal care are considered, the results of GAO s meta-analysis show slightly more than 1 million people with AD over the age of 64; (4) the result would be higher--closer to 1.4 million people with AD--if all mixed cases and missed cases were included in all studies; (5) consistent with all earlier research, the results for both any AD and moderate or severe AD demonstrate that the prevalence rates increase...
